

Planning, Designing and Implementing BCMS with ISO 22301

Program Description

Business Continuity Management (BCM) involves continuation and recovery of business activities and processes in the event of any disruption. It must be managed through scoping, risk evaluation, business continuity strategy, business continuity objectives, planning, development, socialization, training, testing, reviewing and continual development.

ISO 22301 provides an international best practice framework covering the whole BCM lifecycle. It constitutes of identifying strategic and tactical capability of an organization to plan for and respond to incidents and business disruptions in order to continue business operations at an acceptable pre-defined level and minimize the downtime and impact of disruption as well as speed up the recovery time.

Trainer: Goutama Bachtiar
