This IT Balanced Scorecard training course is suitable for project managers and team leaders, IT developers and testers and for business people who are involved in IT projects and IT operations. There are no prerequisites - no prior management training is necessary, no specific IT knowledge is needed.

The course is built around a series of consecutive structured lectures, class exercises, and class discussions with the perspectives of Information Technology.

Objectives

Today's IT Balanced Scorecard presents unique challenges to the IT operation and services requiring coordination with many stakeholders and integration of various technological capabilities.

In Managing IT operations, participants will discover critical success factors and hidden risks inherent in IT operation-and participants will leave with an understanding of strategies and techniques developed in the field by experienced IT Balanced Scorecard managers for successfully managing IT operations and smooth implementation of IT strategy.

"IT" means different things to different people. This course addresses all areas of IT operation management which are hardware, software, systems integration, communications, and human resources.

Participant will learn techniques to determine service requirements, set goals tied directly to stakeholder needs, get the most from IT operation team, and use Balanced Scorecard as tools to improve IT services and strategy implementation.

By extending traditional Balanced Scorecard concepts into the IT arena, participants will gain an understanding of the strategies and skills necessary to manage and implement IT strategy of any size.

And further participants will take home powerful tools to enhance their IT service capabilities, as well as written text in our course binder explaining the concepts in each unit for reference when you return to the workplace.

Participants will learn IT Balanced Scorecard skills through hands-on exercises, interactive case studies, and relevant discussions with peers and an experienced IT Balanced Scorecard instructor. This approach allows participants to practice new skills and ask questions as participants assimilate a broad array of practical experiences that can immediately be applied when they return to the workplace.

Target Audience

- Senior and Middle Project, Operations Managers and IT strategy implementer
- Managers wishing to increase or update their knowledge of IT Balanced Scorecard methodology functions and processes.
- Others with an interest in improving IT services and operation management results within their organizations, and who would benefit from an understanding of the balanced Scorecard knowledge as related to IT strategy implementation.
